

Pooley Bridge

Future Flood Risk Management

December 2017

Background

Following Storm Desmond, flood risk management authorities were commissioned by Government to reduce flood risk not only at community level, but to look for options to reduce flood risk across the County from Source to Sea. This means we have taken a new approach, working at a catchment scale to integrate land management, development and resilience from the tops of the fells down to the coast. In order for us to deliver flood risk benefits across the County in this way we are now part of an established partnership called Cumbria Strategic Flood Partnership (CSFP).

What does Cumbria Strategic Flood Partnership do?

The CSFP aims to lead, coordinate and monitor the management of flood risk across the County. This Partnership brings together Flood Risk Management Authorities including the Environment Agency, Cumbria County Council, District Councils, United Utilities and representation from other organisations including land managers and community groups who have an interest in, or responsibility for, flood risk management.

The CSFP is structured over two levels – the Board (strategic level) and Catchment Management Groups (operational/delivery level). The Board takes an overview of the whole Partnership, setting the direction and ensuring the three Catchment Management Groups deliver their objectives. The Board is currently chaired by Cumbria County Council and the Eden Catchment Management Group is chaired by Eden Rivers Trust.

Cumbria Strategic Flood Partnership Community representation

A key objective of this Partnership is to ensure communities are represented at both a strategic level and at an operational level. The CSFP has appointed 6 community representatives (2 for each catchment area) to be a member of the Board and Catchment Management Group.

Your community Board representative for the Eden catchment is John Kelsall and your Catchment Management Group representative is Richard Milne.

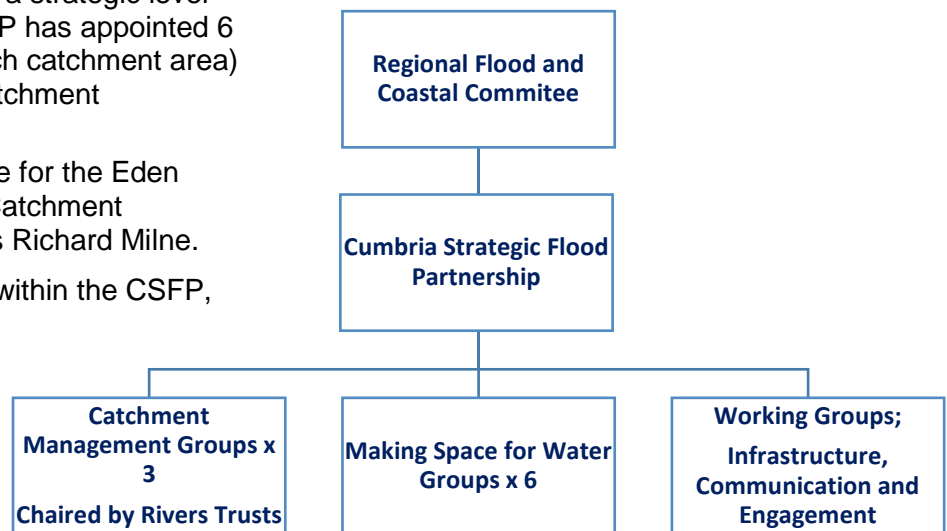

If you have any queries on their role within the CSFP, you can contact them on:

John Kelsall

Pooley Bridge

Future Flood Risk Management

Work undertaken in Pooley Bridge

Following the flood event in December 2015, the Environment Agency has:

- Collaborated with United Utilities to survey the “Freshet”. This is a large pipe running under the B5320 from adjacent to the Steamer pier to downstream of the bridge. We are exploring the possibility of using this pipe to provide improved drainage to the road to convey surface water and wave overtopping. This survey is currently ongoing.
- Started developing a plan to install temporary defences to the north of Finkle Street. Subject to landowner approval this will provide increased flood resilience to the village prior to the completion of a permanent scheme.

What next?

In Summer we published the “long list” of options and we have been refining each option, measuring their viability against the following four tests;

1. Technical feasibility
2. Economic viability
3. Environmental sustainability
4. Community support

We are now at a stage where we have a refined “short list” options for Pooley Bridge and want to share these with the local community. These options currently represent a sufficiently good return on government investment to allow us to continue to develop the business case.

The next stage of the business case will see us progress with detailed design and optimisation of the scheme as well as liaising with landowners, applying for the planning applications and permits required to deliver a scheme.

Options which are most likely to move forward include a flood defence embankment to the north of Finkle Street (although this remains subject to landowner approval) and enhanced property level resilience for the properties on the B5230 upstream of the bridge.

We will continue to work with United Utilities to explore whether or not their “Freshet” structure that runs beneath the B5320 can be used to provide an additional flood risk benefit; probably by providing improved drainage to the road.

We will also be supporting the County Council and their architects by providing flood risk advice relating to the design of the new bridge.

In addition to this we are also;

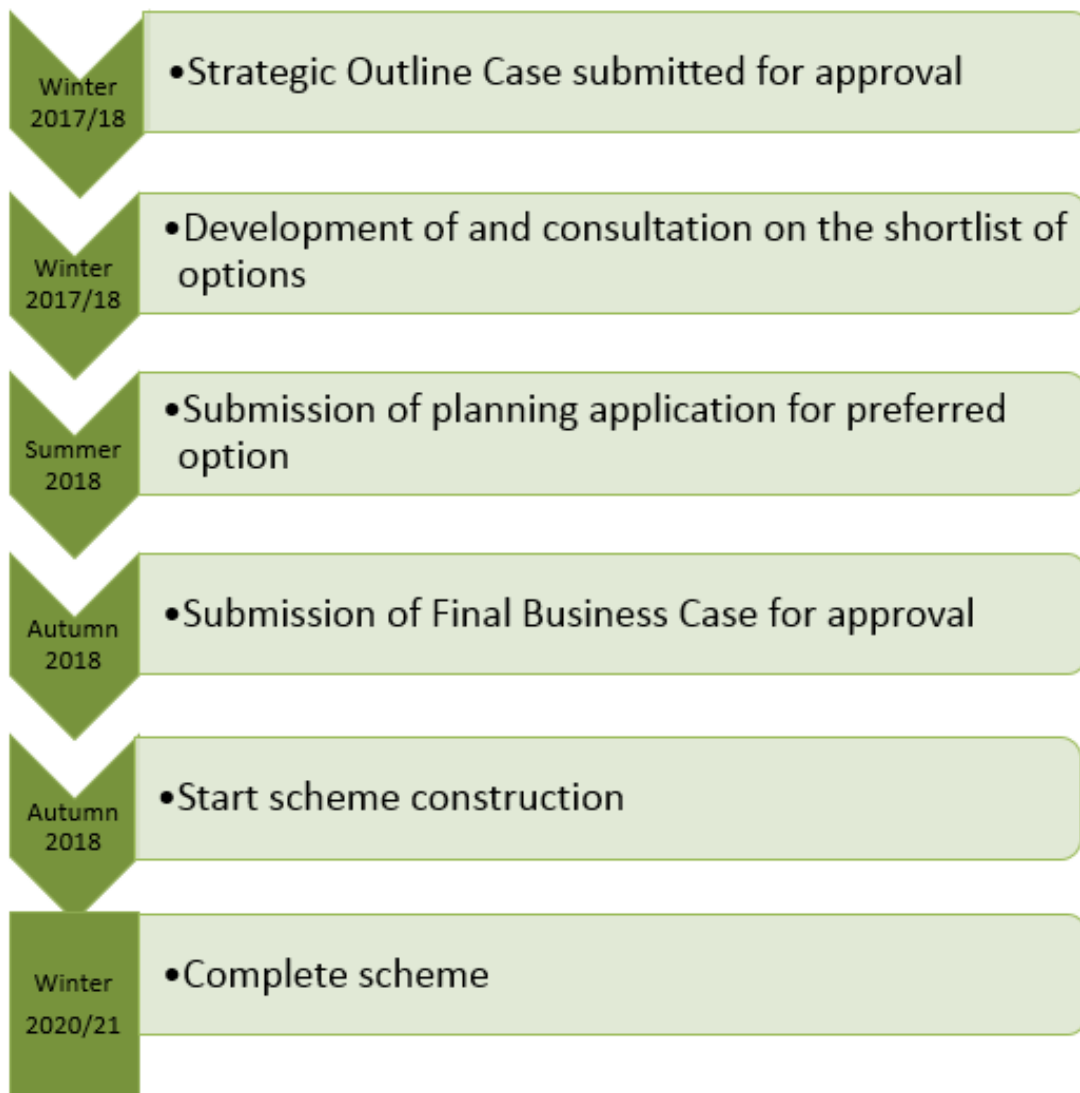

- Improving the river telemetry station by raising the equipment, adding additional sensors and upgrading the station to dual communications to increase data resilience and assist with recording, forecasting and warning.
- Undertaking our standard maintenance. Further information can be found at <https://www.gov.uk/government/publications/river-and-coastal-maintenance-programme>

We are organising a community drop-in for Pooley Bridge and Eamont Bridge which will take place in Eamont Bridge Village Hall on Tuesday 30th January. Drop in any time between 2pm and 7pm. We will formally share the “short list” of options with you and will have plans showing where each option could be located. We will provide an update on the next steps.

Pooley Bridge

Future Flood Risk Management

Outline Delivery Programme

The Strategic Outline Business Case provides a high level understanding of the flood risk and demonstrates the need to continue working on a scheme and complete the Final Business Case.

The Final Business Case provides all the detailed technical, economic and environmental information to justify a compelling case to invest the money to build a scheme.

This process can take some time. As we are spending Government's money in providing flood risk management we must follow their rules and procedures.

For further information on the funding process and the rules we must follow, read the "guide on how the Environment Agency fund and deliver flood risk management schemes" under the 'Funding' section of the Cumbria Strategic Flood Partnership website <http://www.cumbriastrategicfloodpartnership.org>

Future Flood Risk Management

Contacting the Environment Agency

If you would like to contact the Environment Agency about future flood risk management you can email PSO-Cumbria@environment-agency.gov.uk. If your query relates to community or personal resilience please contact clfloodresilience@environment-agency.gov.uk.

Be flood ready

We will never be able to guarantee a completely flood-free future, and so we encourage anyone living or working in a flood risk area to be aware and to be prepared. We can support you by; signing you up to receive free **flood warnings**, helping you to produce a **personal flood plan**, offering **property resistance and resilience** information and supporting the formation and ongoing work of a **community flood action group**.

It is important that you are prepared for flooding and we encourage you to take 4 simple steps:-

1. Sign up to Floodline to receive free flood warnings

Over 56% of properties within Pooley Bridge have not yet registered to receive flood warnings. The Flood Warning Service is a free system which is used to warn you of imminent flooding to land and property.

2. Know what to do when a flood warning is issued. Have a personal flood plan for you and your family.

3. Keep an eye on the situation. You can view a 5 day weather forecast and monitor the river levels online.

4. Keep up to date with early warnings of heavy rain which could lead to flooding by registering for Cumbria Community Messaging. This is a free e-mail service and is complementary to our Flood Warning Service. To register visit www.cumbriacommunitymessaging.co.uk

For information on the above, visit
<https://flood-warning-information.service.gov.uk/warnings>
or ring Floodline on 0345 988 1188

Community Planning

ACTion with Communities in Cumbria (ACT) is supporting community resilience and emergency planning activities across the county. This includes helping people to get together to share their experiences, think about future risks and who in the community might need additional help. Contact ACT for more information on Tel: 01228 817592 or email info@cumbriaaction.org.uk.
