

The Environment Agency is delivering a Flood Risk Management Scheme to better protect homes and businesses from flooding in the Kent Catchment and improve the local environment and community amenities.

We will be undertaking some preparatory work along Aynam Road starting in August. This newsletter will provide you with information of what site preparation works we will be undertaking during August ahead of construction starting in autumn.

### Utility service diversions

There have been several underground utility services requiring diversion away from the riverside which have now all been completed. These have included Cadent Gas, Electricity Northwest Ltd electricity cables, United Utilities sewer and BT cabling.

### Preparing for construction

In order for us to undertake further site preparation, a full vehicle lane closure along the riverside will be in operation along Aynam Road from the Monday 4<sup>th</sup> August 2025. Vegetation clearance will be undertaken along the riverbank followed by the placing of a number of rock rolls will be placed along the riverbank to provide additional riverbank stability. These will be placed in addition to the existing rock bags which are in place at the foot of the riverbank providing the necessary stability when we come to excavate and construct the flood wall.

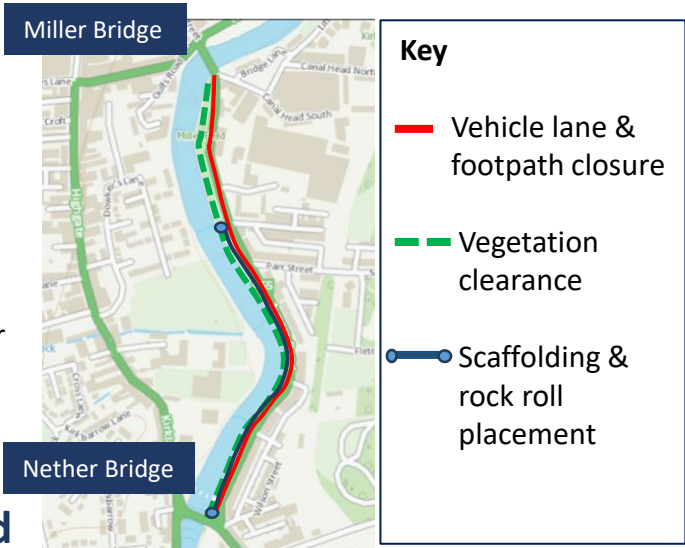

From 18<sup>th</sup> August 2025 scaffolding will be erected along the riverbank which will secure BT cabling away from the immediate construction area.

## Pedestrian and vehicle diversions

Once the riverside lane closure is in place along Aynam Road from 4<sup>th</sup> August 2025, the footpath along the riverside will be closed along with the vehicle lane. All traffic and pedestrians will use the left-hand lane and footpath along Aynam Road.

We will retain all vehicle and pedestrian access to Miller Bridge and Nether Bridge and pedestrian access to Jennings Footbridge.

## The flood scheme along Aynam Road

The flood scheme will incorporate a range of public realm features along Aynam Road. The north end of the river near Miller Bridge, Webster railings will create a gateway onto a new riverside footpath.

Along the central section of Aynam Road, glass panels will retain much loved riverside views.

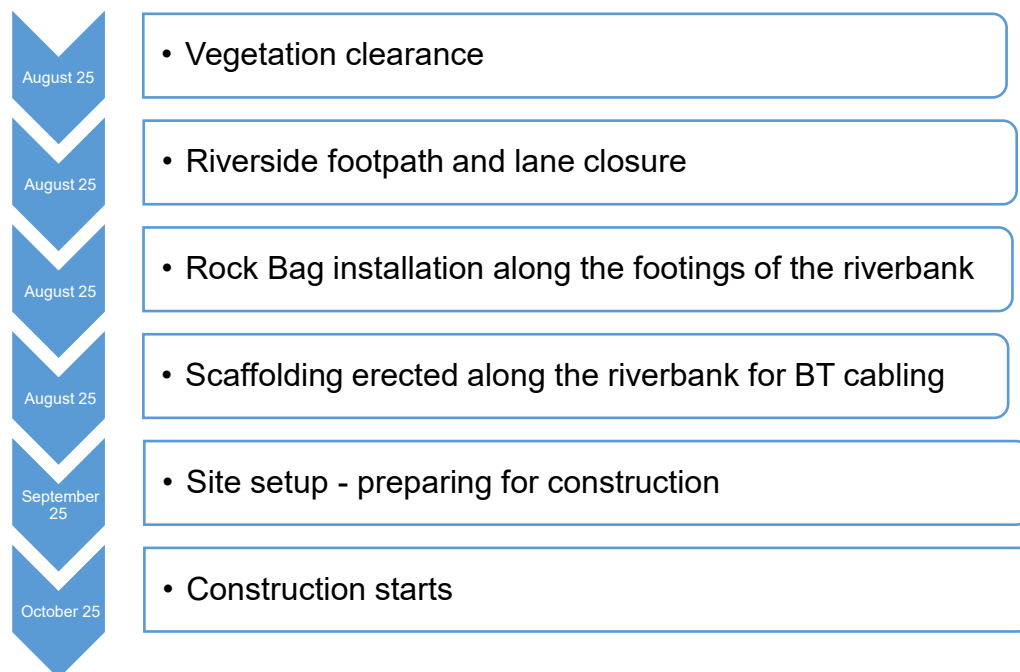

At the southern end of Aynam Road a new flood wall will host a viewing platform up the river and a new access down to the ford.

### Programme of works
